

Global Health Procurement & Supply Chain (PSM) Collaboration

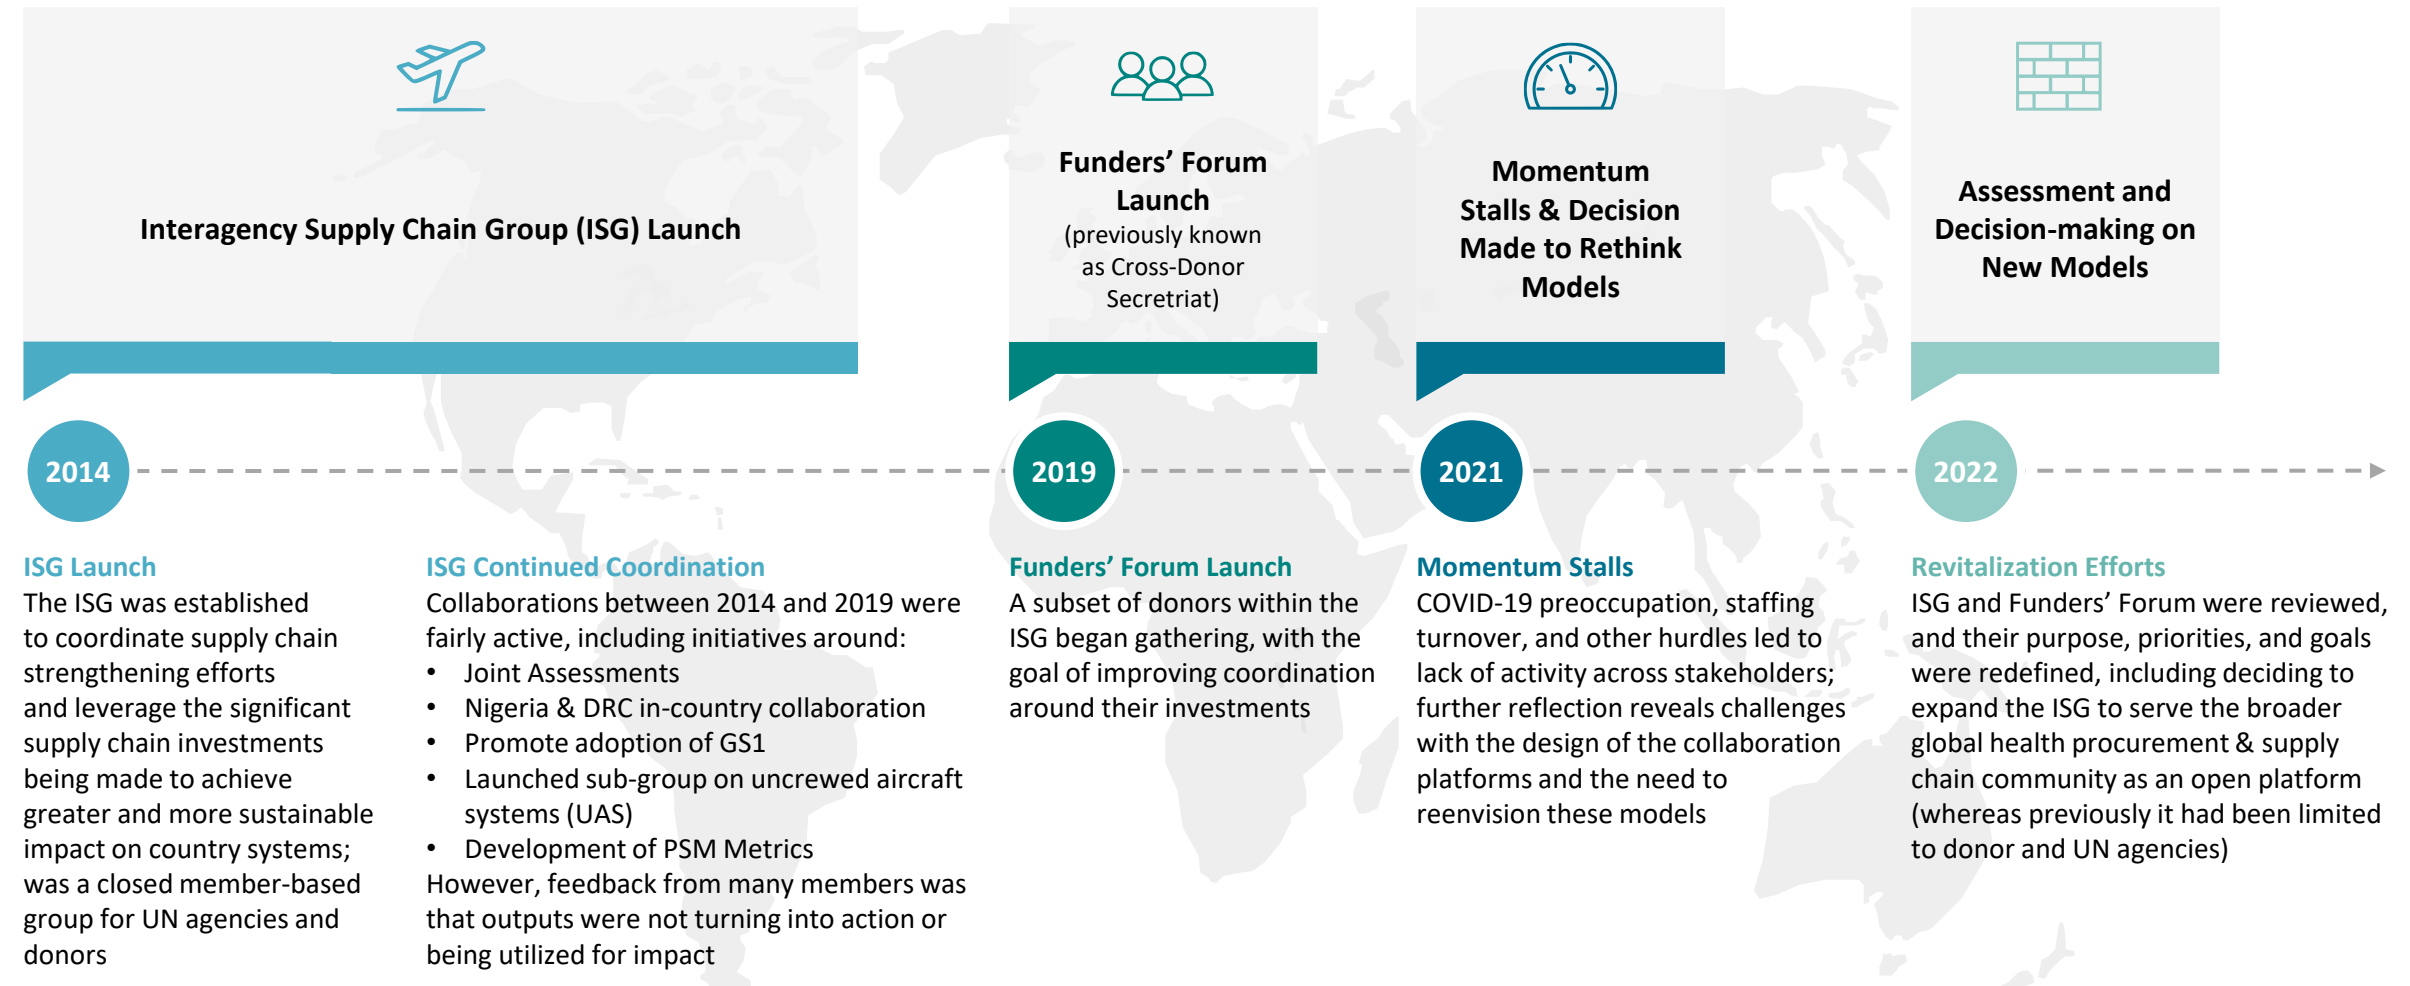

Current efforts to strengthen cross-agency and cross-program collaboration among GHIs and the wider PSM community

Initial FGI Briefing Pack
September 2023

When collaboration in the procurement and supply chain management (PSM) space is absent or insufficient, we experience negative outcomes

Key consequences when collaboration is lacking	Examples
1 Investments and strategies implemented with contradicting objectives	<i>Some stakeholders invest in outsourcing while others invest in warehouses in the same geographies; or pushing governments to outsource where relevant private sector capacity doesn't exist</i>
2 Opportunities missed to advance the field and compound impact	<i>Lack of alignment for digital supply chain system implementations resulting in big spend, sub-par results, and partially implemented systems lacking strong process and people components</i>
3 Inability to scale and learn from proof of concepts	<i>GHIs invest in innovation pilots, with limited alignment and no cohesive plan on scaling the promising interventions and/or applying lessons learned</i>

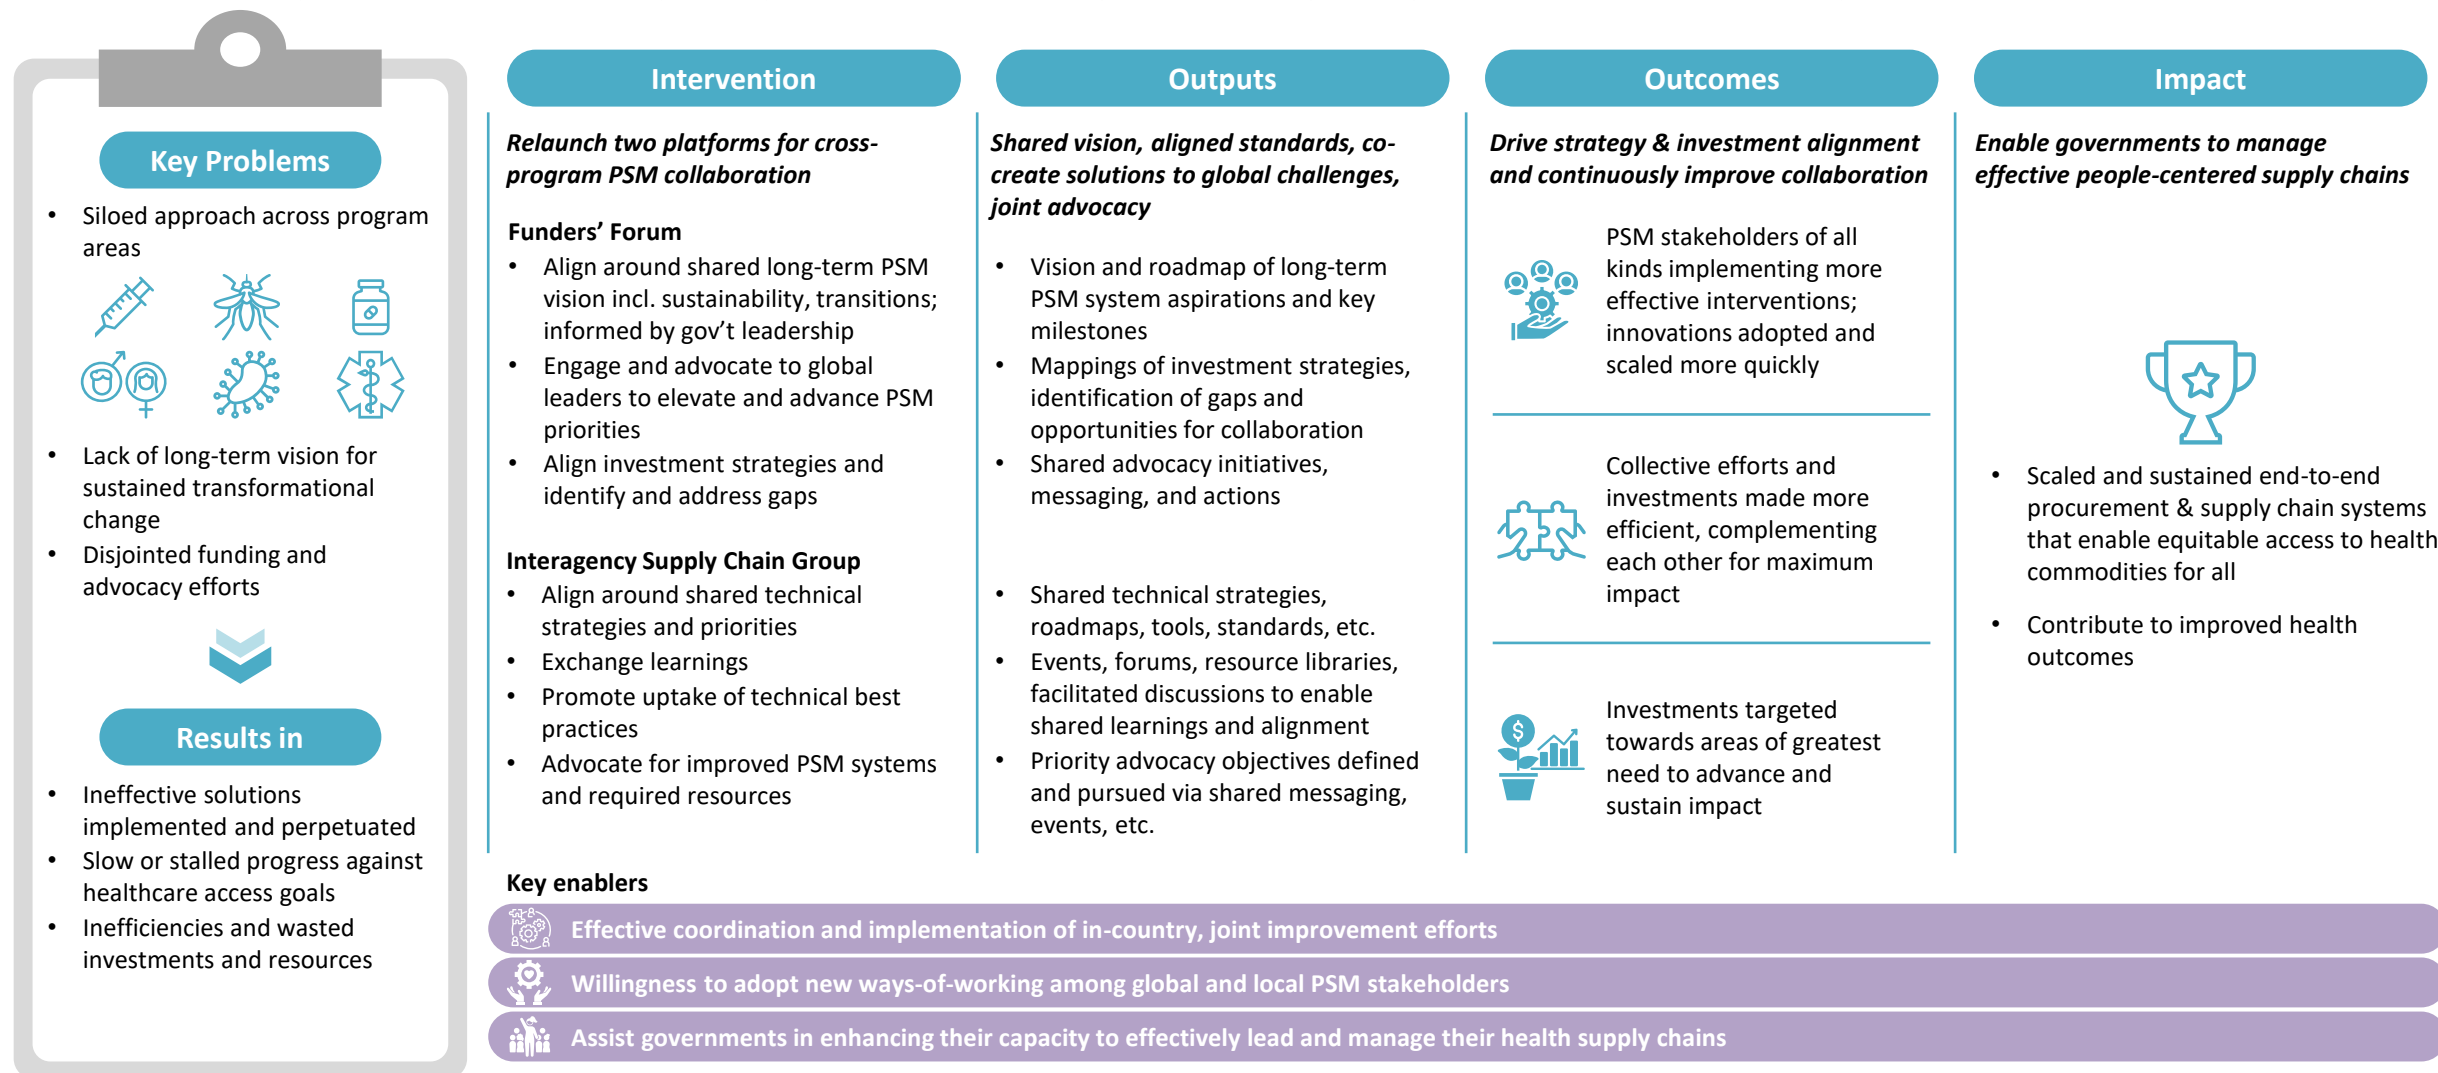

Therefore, many attempts have been made to establish & strengthen platforms for global PSM collaboration across health/disease areas

In addition to these forums, which span across health areas and technical topics, there are many other forums beyond the scope of this deck that foster coordination within a designated health or technical area (e.g., Reproductive Health Supplies Coalition, Gavi's iSC2 group for immunization, etc.)

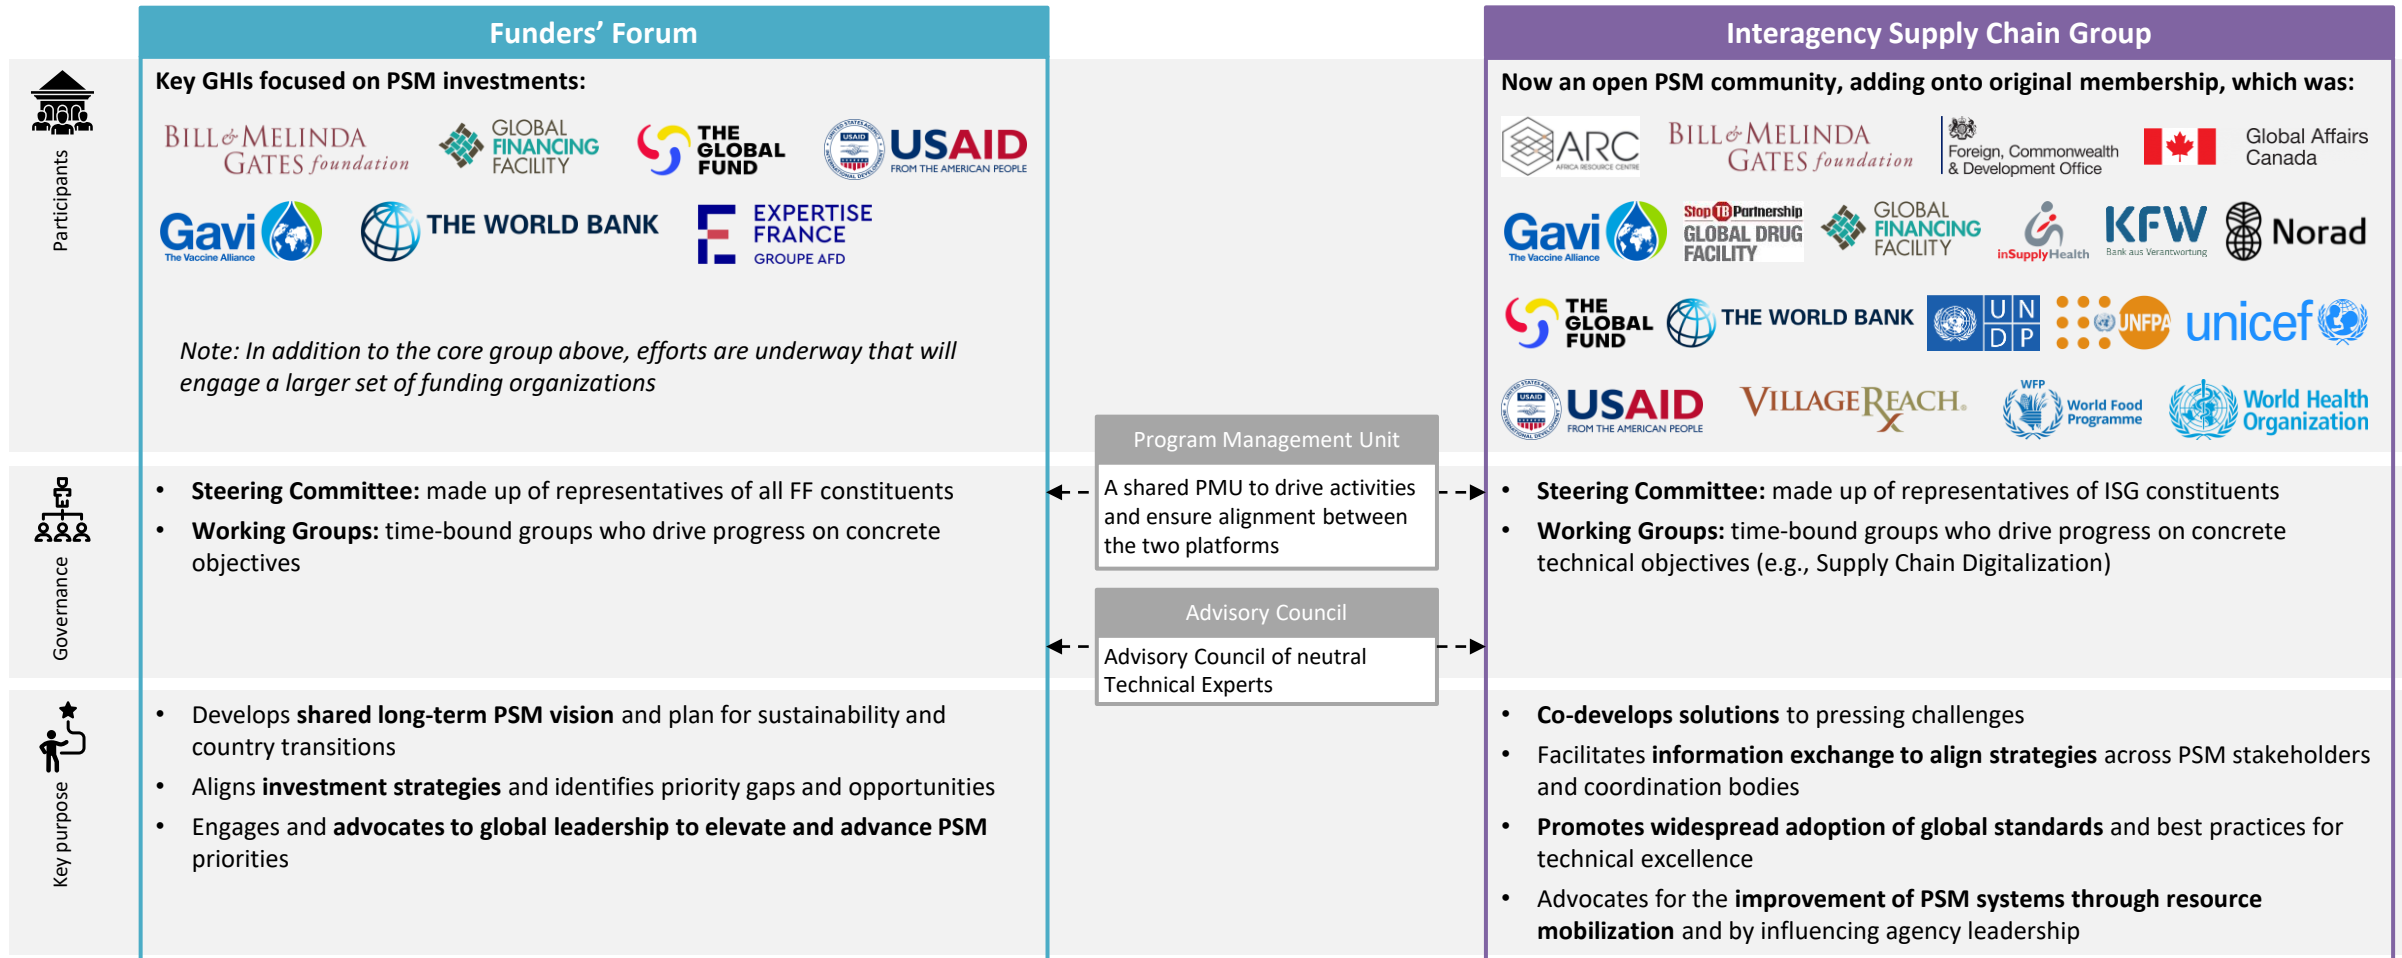

Theory of Change for Strengthened PSM Collaboration

Enhanced PSM collaboration guided by a shared vision empowers the global community to unite, coordinate joint improvement efforts, overcome resource limitations, and partner more effectively with governments to drive positive change, long-term PSM success, and improved health outcomes

Two platforms for global collaboration are being relaunched to be more streamlined, targeted, and inclusive

These forums specifically focus on driving collaboration and alignment across health/disease areas (e.g., malaria, HIV, sexual and reproductive health, etc.) and will partner closely with existing coordination bodies for specific health areas and technical topic areas

Initial Funders' Forum and ISG priorities and envisioned change

Initial priorities will drive strategy and investment alignment around a shared PSM vision, while working to further improve collaboration & coordination among GHIs and the wider PSM community

Funders' Forum		Interagency Supply Chain Group	
Key priorities	How will it drive change for GHIs?	Key priorities as ISG transitions to the new model	How will it drive change for GHIs?
 <p>Develop shared long-term PSM vision with consideration for long-term sustainability, transition, etc.</p>	<p><i>Health impact can be accelerated by increasing supply chain collaboration and alignment around a shared PSM vision. It will allow GHIs to:</i></p> <ul style="list-style-type: none"> • <i>Co-create shared solutions to global supply chain challenges</i> • <i>Set systems strengthening priorities and approaches in line with the vision's sustainability and transition goals</i> • <i>Elevate the conversation around what it takes to achieve sustainable supply chains for health</i> • <i>Ensure consistency across stakeholders to speak one PSM language</i> 	 <p>Advance digital supply chain transformation efforts</p>	<p><i>Advancing digital transformations will create one source of truth and informs GHIs on e.g., disease burdens, health impact, product uptake, system improvement initiatives</i></p>
 <p>Engage and advocate to global leadership, including non-health actors, to elevate and advance PSM priorities</p>	<p><i>GHI investment strategies and decisions, can be aligned to the shared PSM vision to ensure consistent funding for priorities where collectively they have the greatest impact and support government needs and goals</i></p>	 <p>Define the ISG's approach to advocacy and identify opportunities to elevate supply chain on global agendas</p>	<p><i>Aligning on what is needed to bring about sustainable change and working together to address those needs will help set GHIs up for success to reach procurement & supply chain goals</i></p>
 <p>Align investment strategies and identify and address gaps</p>		 <p>Continue to refine the new ISG model and operational approach and begin transition to the future state</p>	<p><i>Periodically addressing lessons learned will further refine collaboration and coordination amongst GHIs, align their PSM strategies and systems strengthening initiatives</i></p>

Early wins through the two platforms

In transitioning to the new model to overcome past challenges, the constituents feel the momentum is right to demonstrate the potential of improved collaboration and address key health supply chain conversations and explore technical solutions related to supply chain digitization

2022

Deployed Initiatives 2022

Focus Area & Objective

New Model for Collaboration Defined

Goals, priorities, and structure of new model is determined to best respond to identified gaps and opportunities

Harmonization of Performance Management Metrics

Define a harmonized list of in-country SC metrics including definitions for donor agencies

End goal for collaboration efforts for this topic

- Increased effectiveness and efficiency of GHIs and other stakeholders working in the procurement and supply chain space; ultimately leading to improved access to health services and commodities

- Donors and GHIs embed harmonized list of SC (e.g., in USAIDs NextGen Global Health Supply Chain, GF 2023-2025 grants)
- Countries and organizations exchange, compare, and utilize data consistently across commodities to inform priorities and interventions

2023

Deployed Initiatives 2023

Focus Area & Objective

Supply Chain Digitalization

Establish centralized living SC Information Systems Guidance (target standards) to support country decision-making

Investing in Global Health Procurement and Supply Chain Workshop

Convening 25+ funders and government representatives to identify key investment priorities for the next 10-20 years

End goal for collaboration efforts for this topic

- Countries adopt and sustain healthy digital information systems that enable them to manage supply chains effectively
- Collaboration continues to advance digital infrastructure and processes, with GHIs and other stakeholders promoting streamlining and sustainability across program areas

- Develop a shared long-term PSM vision that GHIs can use to align strategies and investments
- Identify gaps that will prevent achievement of long-term goals and design strategies to address those gaps, including fostering collaboration across funders

Both platforms are gearing up to become fully operational in time for 2024

Key next steps

- ✓ **Contracting underway for new PMU** to drive forward Funders' Forum and ISG objectives
- ✓ **Funders' workshop taking place in October** with >25 funders and government representatives to align on investment priorities for the next 10-20 years, including priorities for Funders' Forum activities in the near-term
- ✓ **ISG participation expanding** to be inclusive of broader set of constituents by end of year
- ✓ **ISG priorities for 2024 to be defined in Q4**, including soliciting input from broader procurement and supply chain community
